

INTEGRATION PARTNERS

Orcoda: Digitally transform your transport operations with an efficient transport job management solution

Category: Job Management & Execution

Solution: TN360, SmartJobs

Software: Orcoda Logistics Management System (OLMS) and Orcoda Workforce Logistics System (OWLS)

Hardware: MT201/iFace

The need to modernise business practices is important to effectively and efficiently manage jobs to allow your business to maximise profitability and improve customer

service. This is typically a full-time job, and in a growing business, often a team's worth of work.

With the integration between Orcoda's logistics management system and Teletrac Navman's TN360, AI-enabled fleet management solution, via an advanced and secure two-way API, the two platforms bring significant advantages to the transport and logistics industry.

BENEFITS OF INTEGRATION

With the power of both Teletrac Navman and Orcoda, you are able to optimise and digitally transform your operation with AI enabled logistics and fleet management solutions all within an integrated packaged. The systems are designed to provide you 100% visibility across all your vehicles and drivers while out in field, to give you insight and analytics previously unattainable.

Optimise your fleet

- Increase: trips per vehicle, collections/ deliveries per day and billable kilometres
- Automated schedules and rosters that comply with constraints and adapt to changes in real-time
- Handles networks with multiple depots, loading docks, collections, and deliveries

Deliver better service

- Front-end booking platform/CRM, includes a payment gateway
- Live status information
- Help to meet customer delivery and pickup windows
- Visibility to your customers via the free Orcoda Notify App to track deliveries
- Improve your reputation through improved service and communication

Risk Reduction

- Capacity within vehicles - size and weight restrictions
- Improve scheduling and driver hours through improved systems
- Safety alerts for lifting parcels
- Work within depot constraints - number of deliveries/collections per time slot
- Dashboard and alerts that comply with government regulations

ONE CENTRAL PLATFORM TO CONTROL

Data gets optimised to accurately allocate jobs

Optimise, integrate and digitally transform your transport operation. Streamline your transport and supply chain logistics with 100% visibility with the power of both Orcoda and Teletrac Navman. With cloud-based solutions, you enable your team to rapidly implement control over field operations in real time, thus reducing risk and improving efficiency.

Data Optimisation

Account for every attribute and multiple constraints of your transport operation

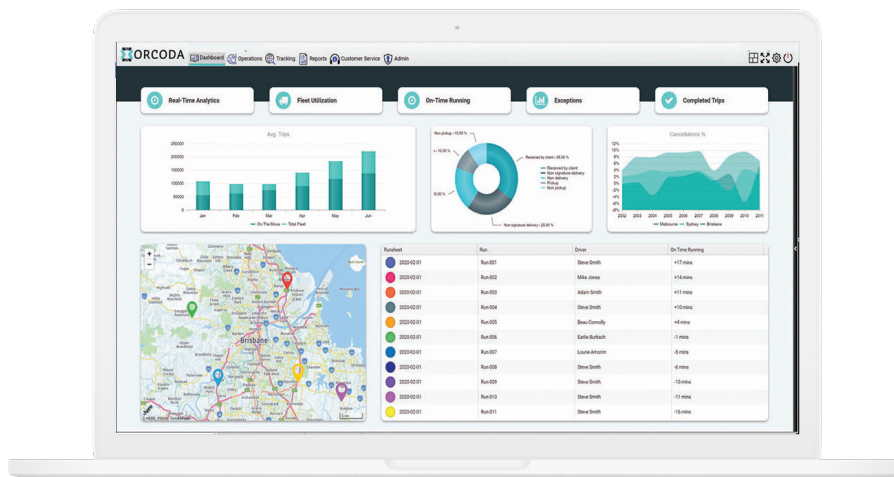

AI powered

solution for job allocations. Creating schedules and runsheets, that comply with multiple constraints

Optimised in-vehicle

runsheets to help your drivers' complete jobs efficiently

The OLMS solution has brought management, transparency and consistency as well as increased visibility, efficiency, control and accountability of our delivery process."

Nick Pappagianis, Transport Manager, Vic
